EXPERIENCE

Argo

Co-Founder & Full Stack Software Engineer

Singapore

Aug 2025 – Present

- Architected a distributed event-driven backend on GCP (Cloud Run, Pub/Sub, async workers) to isolate long-running AI workloads from user-facing request latency
- Orchestrated multi-stage AI pipelines combining transcription, OCR, and LLM extraction to transform unstructured travel content into structured itinerary data
- Designed PostgreSQL schemas with Supabase RLS and real-time collaboration workflows supporting concurrent itinerary editing
- Engineered full-stack platform features using Next.js, React, Express, and Tailwind across synchronous APIs and async worker services
- Integrated Google Maps, Places, and routing APIs to enrich geospatial metadata and improve itinerary optimization accuracy
- Automated containerized deployments with Docker, Terraform, and GitHub Actions for reproducible infrastructure provisioning

PROJECTS

Discord Helper Bot

Python · Deepgram · OpenAI · Railway

- Shipped meeting intelligence for my team's Discord server: uploaded recordings (up to 100MB) flow through Deepgram speaker diarization and OpenAI structured extraction to produce summaries, decisions, blockers, and action items
- Integrated GitHub PR webhooks and task automation into the same async bot, consolidating team workflows into a single surface
- Persisted bot state and transcripts in SQLite on Railway; discarded raw audio post-processing for privacy

Crux – Fitness Tracker PWA

SvelteKit · TypeScript · Supabase

- Built a custom outbox sync engine on Dexie/IndexedDB that reconciles offline writes with Supabase, handling conflicts across mobile and desktop on unreliable networks
- Shipped an installable PWA with authentication, workout tracking, and multi-device sync — used personally as my daily training log
- Visualized workout and body-metric trends with D3 dashboards, backed by Workbox service worker caching for full offline usability

Jacker – AI Job Application Assistant

Next.js · Supabase · OpenAI

- Built a Gmail-to-dashboard pipeline using OAuth2 and LLM extraction to convert inbox noise into structured job-tracking records — used personally to manage my own application funnel
- Designed deduplication and upsert workflows to keep the database consistent across repeated ingestion cycles
- Launched a Chrome Extension (Manifest V3) that scrapes job postings from any career page and triggers authenticated backend workflows

SKILLS

Languages

TypeScript, JavaScript, Python, SQL

Frontend

React, Next.js, Tailwind CSS

Backend

Node.js, Express.js, OAuth2

Databases

PostgreSQL, Supabase, SQLite, IndexedDB

Cloud & DevOps

GCP (Cloud Run, Pub/Sub), Docker, Terraform, GitHub Actions, Vercel

AI

OpenAI, Gemini, Claude, LLM Pipelines, Prompt Engineering

Architecture

Event-Driven Systems, System Design

EDUCATION

Singapore Institute of Technology

Bachelor of Science (Honours) in Applied Computing
2026 - 2029

Singapore Institute of Management

Diploma in Information Technology
2022 - 2023
